

Summary

Senior fullstack engineer and technical lead with over a decade of experience across TypeScript/Node.js, React/Next.js, and Angular. Builds AI-powered features end to end - LLM and RAG systems on the GPT API and AWS Bedrock-alongside data-intensive platforms such as large-scale search, Temporal-based importers, and payment processing. Comfortable owning architecture, mentoring teams, and leading technical hiring.

Experience

May 2025 - **Senior Fullstack Engineer,**
May 2026 **CLICKUP**

Worked on ClickUp's import platform, using Angular, Datadog, Tilt, and Harness across development, debugging, and production rollout:

- Built and maintained importers that bring data from external productivity and project management tools (e.g. Asana) into ClickUp.
- Developed TypeScript/NestJS backend services handling import workflows for tasks, comments, attachments, subtasks, and project mappings.
- Wrote Playwright end-to-end tests covering the importers to verify reliable, regression-free imports.
- Migrated a legacy importer from a traditional TypeScript service to a Temporal workflow for durable, fault-tolerant execution.
- Leveraged AI-assisted development tools such as Cursor and Claude Code to accelerate codebase exploration, implementation, and refactoring.

Aug. 2024 - **Principal Engineer,**
Feb. 2025 **CIRCA**

Led a cross-functional team as a hands-on principal engineer, owning architecture and delivery of services deployed on AWS and Railway:

- Managed and mentored the team, planned sprints, and established code-review standards.
- Partnered with the lead designer to define product vision, version scopes, and release strategy.
- Built an AI-powered Life-Cycle Assessment (LCA) assistant with a NestJS backend and Next.js frontend: text and image analysis powered by AWS Bedrock, interactive Q&A, real-time WebSocket chat, and chunked file uploads to AWS S3.
- Designed and built a PostgreSQL-backed search platform over millions of records on a NestJS backend, optimizing SQL queries and managing database migrations.

Jan. 2023 - **Technical Lead,**
Aug. 2024 **BEESAFE**

Promoted from Full Stack Developer to Technical Lead, owning architecture and mentoring the full-stack team:

- Mentored a team of 5 developers, led technical recruiting, and defined technical roadmaps, driving refactoring, new features, and architectural improvements alongside company leadership.
- Standardized solutions and best practices across Compensa subsidiaries through cross-company collaboration.
- Led an AI invoice-extraction tool that parses uploaded PDF invoices with the GPT API via LangChain, using pgvector to retrieve labeled examples (retrieval-augmented generation) for accurate field extraction.
- Designed scalable architectures and API contracts for core services and external-partner integrations.
- Built and maintained payment processing systems handling incoming/outgoing transactions, installment plans, and automated financial reporting (Express/NestJS, PostgreSQL, Redis); optimized Azure/Kubernetes deployments with DevOps.

Mar. 2020 - **Full Stack Developer**,

Feb. 2023 **BEESAFE**

Built the company's insurance application from scratch on a microservice architecture:

- Implemented microservices with Node.js, TypeScript, Express.js, and RabbitMQ; managed PostgreSQL and Redis; tested with Jest and documented the architecture.
- Deployed microservices to Kubernetes and built CI/CD pipelines with GitHub Actions; monitored with Grafana and Loki.
- Evaluated external vendors and designed integration architecture; supported technical recruiting and onboarding of new team members.

Earlier Experience

2018 – 2020 **Software Engineer**, Samsung R&D - Built developer tooling and a WYSIWYG VS Code extension for the Tizen Advanced UI framework (JavaScript, Node.js).

2017 – 2018 **JavaScript Developer**, 10Clouds - Led frontend development for Angular 2+ apps with interactive D3.js charts; also worked with React and Redux.

2016 – 2017 **Programmer**, EY - Built data-analysis, document-validation, and benchmarking web apps plus an Elasticsearch-based search tool (Angular, React, TypeScript, Node.js, PostgreSQL).

2014 – 2016 **Web Developer**, Lionbridge Technologies & Cisco Systems - Built internal web apps and EMEA-facing websites (JavaScript, Angular).

Education

2016–2020 **Computer Science**, *BA, part-time, Polish-Japanese Academy of Information Technology*

2013–2015 **Computer Science**, *BA, Faculty of Mathematics, Informatics and Mechanics*
University of Warsaw

2009–2012 **Mathematics**, *BA, Faculty of Mathematics, Informatics and Mechanics*
University of Warsaw

Technical Skills

Languages & Frameworks JavaScript, TypeScript, Node.js, React, React Native, Next.js, NestJS, Express, Angular, Redux, D3.js, WebSockets

Data & Messaging SQL, PostgreSQL, pgvector, Redis, RabbitMQ, Elasticsearch, Temporal

Cloud & DevOps AWS (S3, Bedrock), Azure, Railway, Docker, Kubernetes, GitHub Actions, Harness, Tilt, Git, Bash

Observability & Other Datadog, Grafana, Loki, Prometheus, Jest, Playwright, AI integration (LLM, text/image analysis, RAG / vector search), LangChain, Data scraping, VS Code Extensions API

Languages

English Advanced (C1)

Polish Native
